Machine Learning Analysis Report

Generated: December 07, 2025 at 21:57

Table of Contents

1. Dataset Summary
2. Preprocessing Steps
3. Model Selection & Training
4. Performance Metrics
5. Visualizations
6. Predictions & Results

1. Dataset Summary

Property	Value
Dataset Name	seq_001_affected
Dataset Type	dna
Total Samples	40
Features	7
File Size	0.01 MB

2. Preprocessing Steps

Step 1: Load and Clean Data

- Loaded 40 sequences from FASTA
- Removed invalid characters
- Extracted labels from headers
- Label distribution: {'affected': 20, 'normal': 20}

Step 2: Handle Missing Values

- No missing values found

Step 3: Feature Engineering (Biological)

- Added 6 engineered features

Step 4: Sequence Encoding (auto)

- Unknown encoding method: auto

Step 5: Feature Normalization (standard)

- Normalized 7 features using standard scaling

Step 6: Data Splitting

- Encoded target variable (2 classes)
- Split data: 34 train, 2 val, 4 test

3. Model Selection & Training

Model	Training Time	Score
Logistic Regression	4.91s	1.0000
Random Forest	3.24s	1.0000
Gradient Boosting	0.15s	1.0000
Support Vector Machine	0.15s	1.0000

Best Model: Logistic Regression

4. Performance Metrics

Training Metrics:

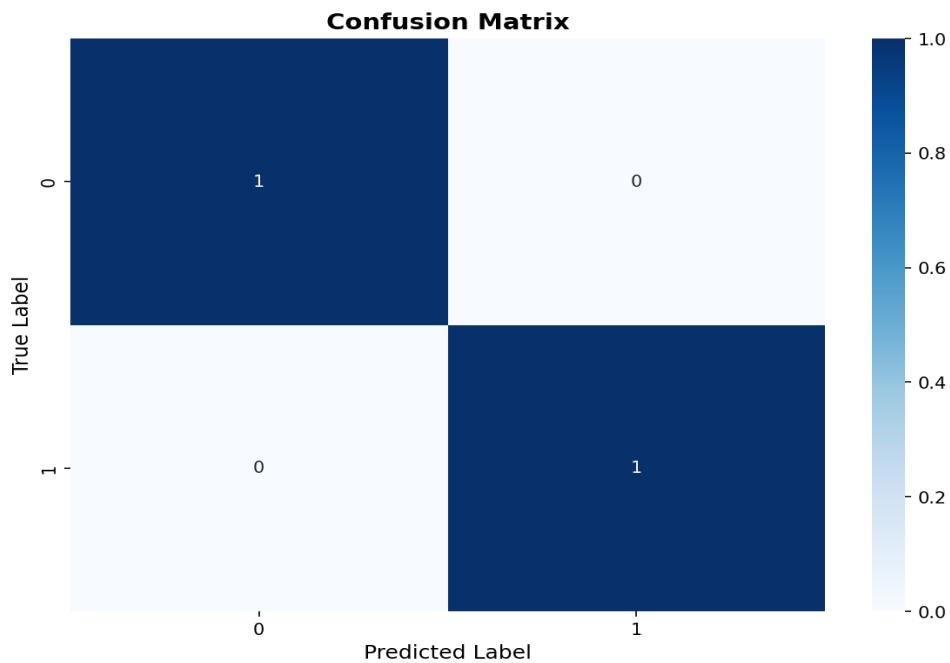

Metric	Value
Accuracy	0.8529
Precision	0.8542
Recall	0.8529
F1 Score	0.8528
Roc Auc	0.9135

Validation Metrics:

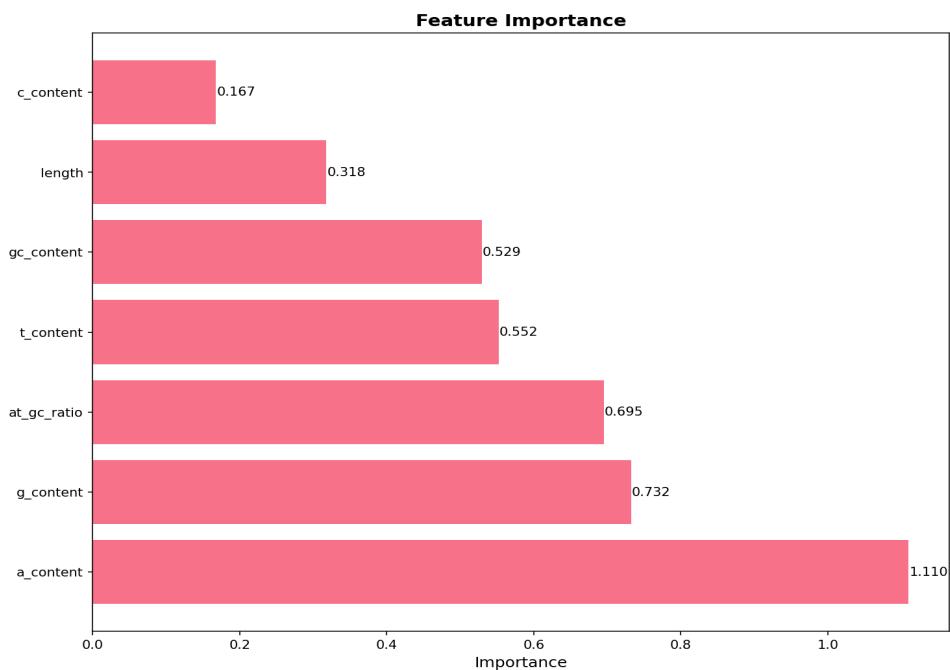

Metric	Value
Accuracy	1.0000
Precision	1.0000
Recall	1.0000
F1 Score	1.0000
Roc Auc	1.0000

5. Visualizations

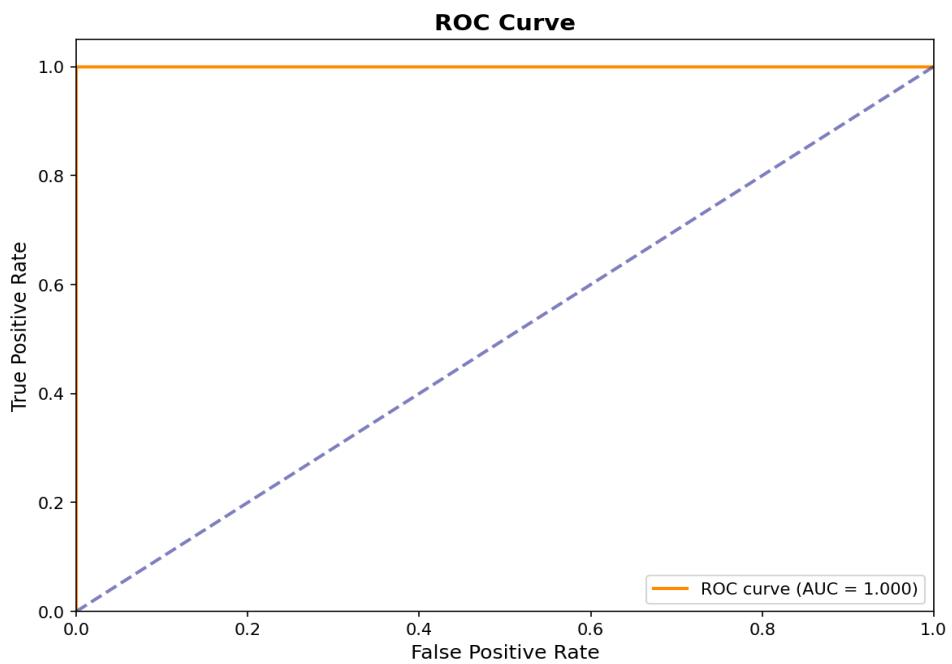

Confusion Matrix

Feature Importance

Roc Curve

6. Training Summary

Total training time: 10.10 seconds

Key Events:

- [SUCCESS] Logistic Regression - Score: 1.0000
- [SUCCESS] Random Forest - Score: 1.0000
- [SUCCESS] Gradient Boosting - Score: 1.0000
- [SUCCESS] Support Vector Machine - Score: 1.0000
- [SUCCESS] Best model: Logistic Regression (Score: 1.0000)
